

Allen 30mm Tiitan Ceramic High Load Block

30mm Tiitan Ceramic High Load Block

Weighing in at only 28 grams the Allen Tiitan block is the lightest and strongest 30mm ball bearing pulley available on the market. This is an incredible 30% weight reduction when compared to even the 30mm Allen XHL block.

The new lightweight titanium sheave includes Allen's specially devised V profile, optimised for the fast running of rope without weakening the working load of the line. The V profile also allows smaller Dyneema or wire lines to be used with the Tiitan block, whilst retaining the friction reduction benefits of a larger sheave diameter.

Typical applications include vang cascades, halyard turning points, backstay systems, high load Cunningham and outhaul systems.

- Lightweight titanium sheave
- Ceramic ball bearings for faster rolling speeds
- High load aluminium side cheeks
- 30% lighter than the XHL block
- 25% higher Breaking load than the XHL block
